>_ ABOUT ME

He/him I like programming in Java, developing mods for Minecraft and Android applications. I know Java Core, Android SDK, I studied Forge API very well. I know how to use the Git version control system. I know the basic principles of object-oriented programming and programming patterns. I understand the principles of clean code. I learned to program in java myself by reading articles on the Internet, reading books, taking courses on Udemy and Javarush. I have been programming for 1 year now. My biggest project - Oshiete Mod I have been developing for 5 months, the number of lines of code in it is more than 20000. Now it is in the pre-release stage of development. You can evaluate my skills by following the link I left to my public GitHub profile. I have also developed several small Android apps and dozens of tiny educational projects. I don't know many technologies and frameworks, but I'm always willing to learn new things. I would like to know what skills are required on your project in order to learn it. I am ready to take any courses that you offer to take.

>_ LANGUAGES

Russian

English

>_ ACADEMIC BACKGROUND

MEDICAL BUSINESS
Novosibirsk State Medical University 2017-2020
Left university because I found myself in programming

>_ PET PROJECTS

Oshiete Mod - https://github.com/Dretha

>_ HOBBIES

- 3D printing and modelling
- Assembly and soldering of electronic custom devices
- Painting
